

Instalação do NaturalONE Full Edition

1. Executar o programa "SoftwareAGInstaller20181016"

2. Clicar em Advanced Options

3. Clicar em Images

 Advanced Options ×

Scripts Images Caching Logging Server

If you need to create identical installations on multiple machines, create a script of the installation on one machine, then run the script on each of the other machines. To encrypt and decrypt user passwords stored in the script, provide a master password.

☐ Use installation script

☐ Create script

☐ For product installation ☒ Install products on local machine ☐ For image generation

Script file:

☒ Install from script

Script file:

☐ Edit script

Script file to edit:

Save script file as:

Master password:

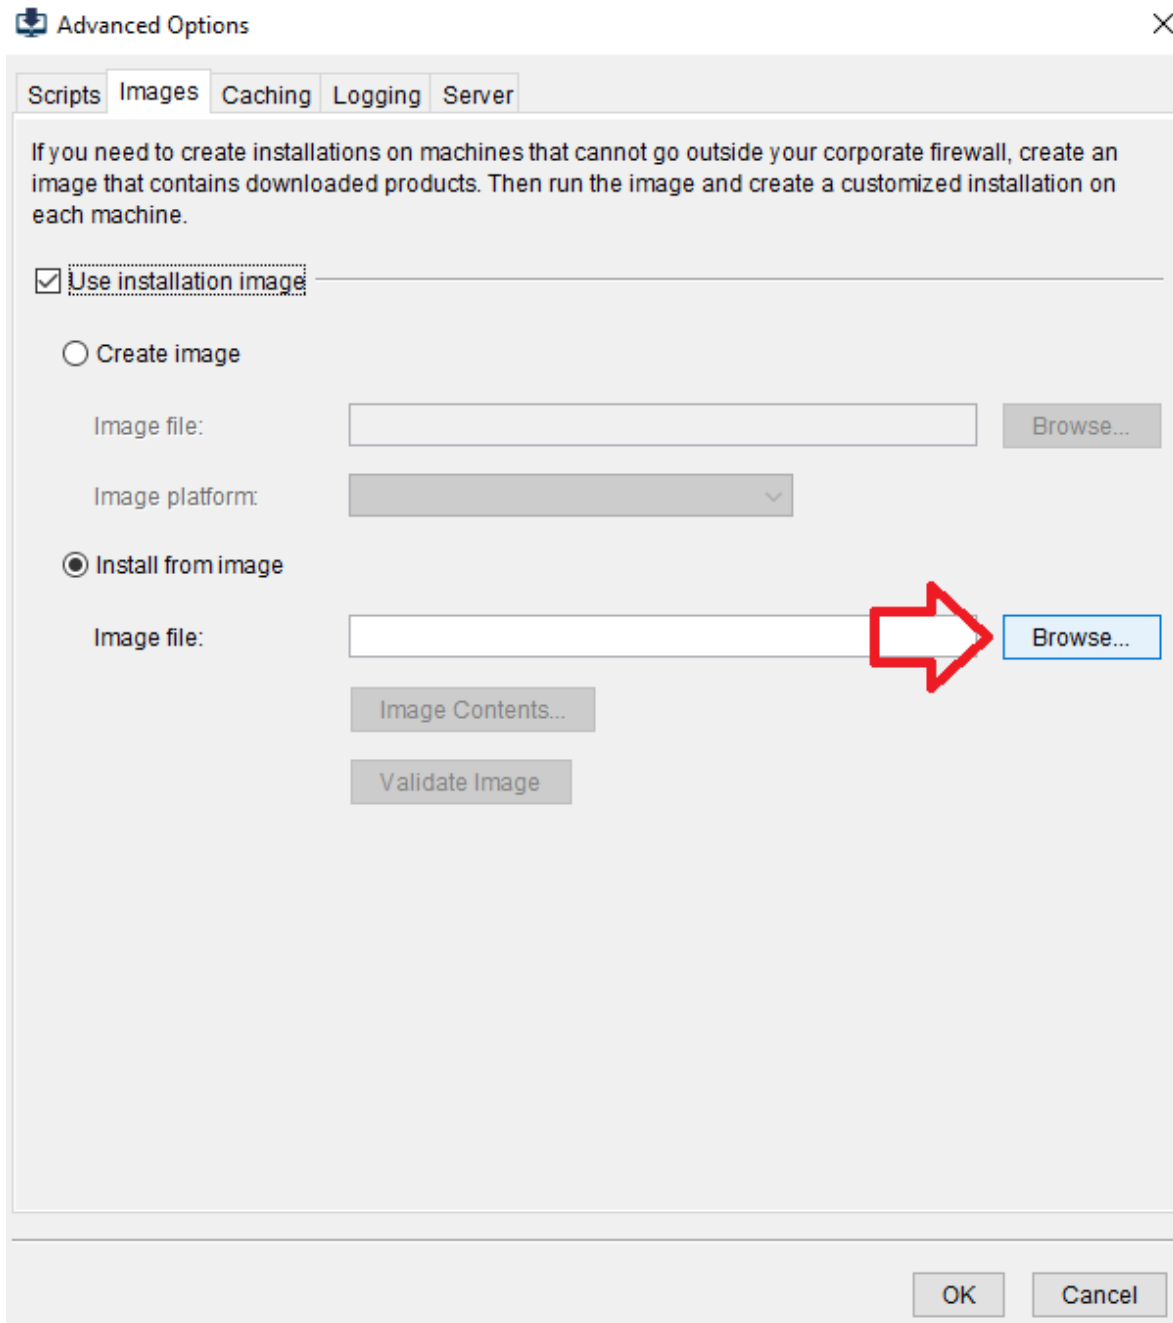

At end of successful installation:

☒ Exit immediately ☐ Display Finish panel

If an error occurs during installation:

☐ Exit immediately ☒ Display error ☐ Display error then exit after seconds

4. Marcar “Use installation image” / “Install from image” / Clicar em “Browse”

The image shows a software window titled "Advanced Options" with a close button (X) in the top right corner. It features a tabbed interface with five tabs: "Scripts", "Images", "Caching", "Logging", and "Server". The "Images" tab is currently selected. Below the tabs, there is a descriptive text: "If you need to create installations on machines that cannot go outside your corporate firewall, create an image that contains downloaded products. Then run the image and create a customized installation on each machine." Below this text, there are two main options, each with a radio button. The first option is "Use installation image", which is checked with a checkbox. The second option is "Create image", which is not selected. Below the "Create image" option, there is a label "Image file:" followed by a text input field and a "Browse..." button. Below that is a label "Image platform:" followed by a dropdown menu. Below the "Use installation image" option, there is a label "Image file:" followed by a text input field. A large red arrow points from this input field to a "Browse..." button. Below the "Image file:" input field for the "Use installation image" option, there are two buttons: "Image Contents..." and "Validate Image". At the bottom right of the dialog, there are "OK" and "Cancel" buttons.

Advanced Options

Scripts Images Caching Logging Server

If you need to create installations on machines that cannot go outside your corporate firewall, create an image that contains downloaded products. Then run the image and create a customized installation on each machine.

☒ Use installation image

Software AG Installer

SOFTWARE AG Installer [About](#)

→Directory →Products →Languages →License →Configure →Confirm →Install

Specify the root directory for this product installation. The installer will install all products in subdirectories of the root directory.

You can install most Designer plug-ins and some other design tools a directory under Program Files. If you specify such a directory, the product selection tree shown next will indicate the plug-ins and design tools you can install.

Installation directory:

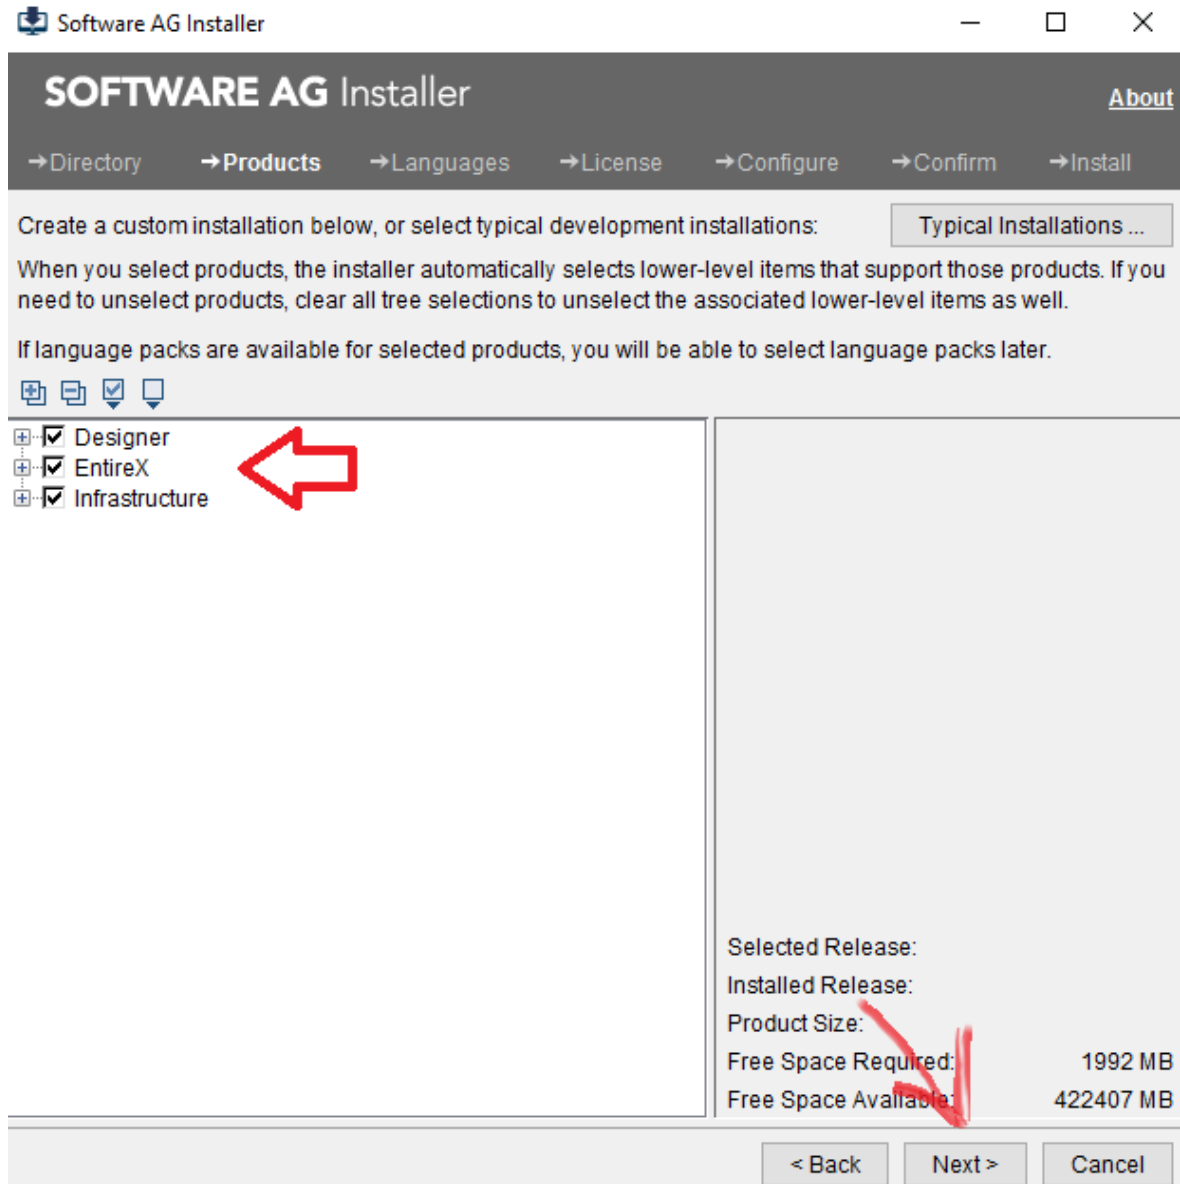

Identify the machine on which you are installing.

Host name or IP address:

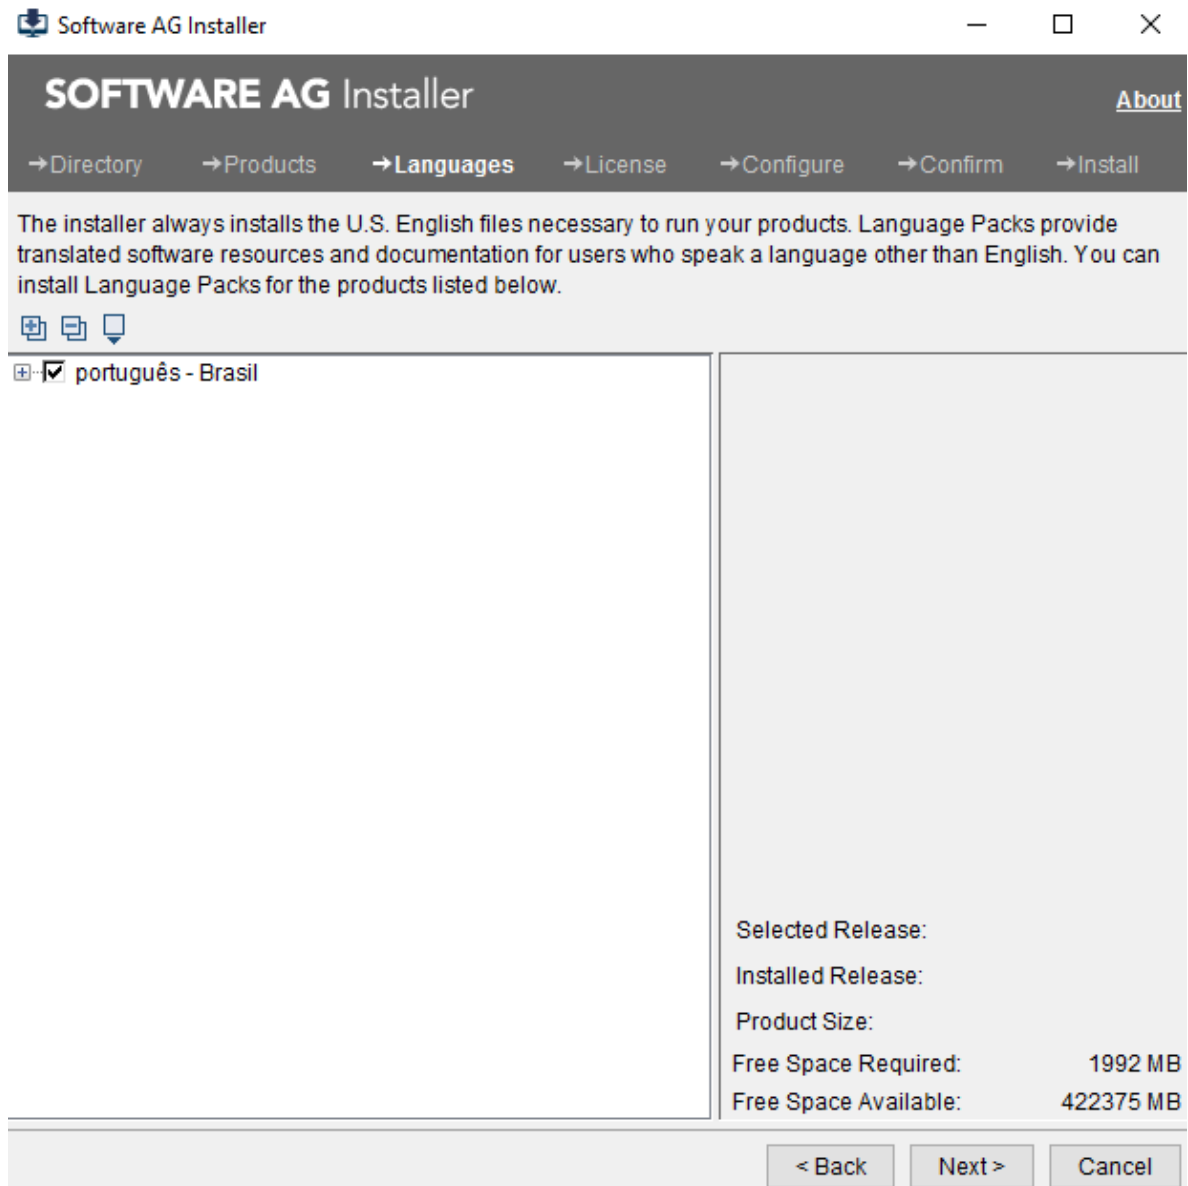

If you have a previous installation and do not want to overwrite shortcuts from that installation, enter a unique Start Menu group name.

Start Menu group name:

8. Marcar todas as caixas e clicar em Next

9. Marcar “portugues – Brasil” e clicar em Next
